

DATA STRUCTURE

LAB PROGRAMS

10. a) Stack – Push operation using array

```
#include <stdio.h>

#define MAX 5

int main()
{
    int stack[MAX] = {10, 20, 30};

    int top = 2;

    int value, i;

    printf("Enter value to push: ");

    scanf("%d", &value);

    if(top == MAX - 1)
    {
        printf("Insertion is not possible. Stack Overflow");
    }
    else
    {
        top++;

        stack[top] = value;

        printf("Stack after Push:\n");

        for(i = top; i >= 0; i--)
        {
            printf("%d\n", stack[i]);
        }
    }
}
```

```
    return 0;
}
```

Output

```
Enter value to push: 45
Stack after Push:
45
30
20
10

=== Code Execution Successful ===
```

b) Stack – Pop operation using array

```
#include <stdio.h>

#define MAX 5

int main()
{
    int stack[MAX] = {10, 20, 30};
    int top = 2;
    int i;
    if(top == -1)
    {
        printf("Deletion is not possible. Stack Underflow");
    }
    else
```

```

{
    printf("Deleted Element = %d\n", stack[top]);
    top--;
    printf("Stack after Pop:\n");
    for(i = top; i >= 0; i--)
    {
        printf("%d\n", stack[i]);
    }
}
return 0;
}

```

Output

Deleted Element = 30

Stack after Pop:

20

10

=== Code Execution Successful ===

c) Stack – Display operation using array

```
#include <stdio.h>
```

```
#define MAX 5
```

```
int main()
```

```
{
```

```
int stack[MAX] = {10, 20, 30};  
int top = 2;  
int i;  
if(top == -1)  
{  
    printf("Stack is Empty");  
}  
else  
{  
    printf("Stack Elements are:\n");  
    for(i = top; i >= 0; i--)  
    {  
        printf("%d\n", stack[i]);  
    }  
}  
return 0;  
}
```

Output

Stack Elements are:

30

20

10

=== Code Execution Successful ===
